

Pedicle Soft Tissue Graft

Patient Name _____ Date: _____

This procedure is performed for tooth # _____ for the following reasons:

- (1) Gingival recession ____mm (CEJ to Gingival Margin)
- (2) Keratinized gingiva Non-keratinized gingiva
- (3) Attached gingival ____mm
- (4) Unattached gingival ____mm
- (5) Root sensitivity: mild ____, moderate ____, severe ____
- (6) Root caries: YES ____, NO ____
- (7) Gingival Inflammation: mild ____, moderate ____, severe ____
- (8) Thickness _____mm
- (9) Mobility _____

Procedure: This procedure is performed to create and augment gingiva, to obtain root coverage, to eliminate sensitivity and to prevent root caries.

The recipient site utilizes minimal incision from which is raised a full thickness flap that retains the overlying flap of gingival and mucosa. The flap is raised from the existing gingival and mucosa and moved coronally. Bioresorbable collagen is placed at the site under the overlying flap.
